

I would request that the 60 meter band be allocated as follows;

1. The band should be segmented as other HF bands, CW allowed on the whole band, small segments for Extra license users, phone be restricted to upper part of the band.
2. Power should be limited on the band, since it's for US use only to no more than 200 Watts PEP to reduce interference to other users worldwide.
3. To reduce interference and crowding no contesting should be allowed on this band.
4. Because this band has more consistent propagation to the Caribbean and South America this band would be an excellent choice for emergency traffic to those areas during the hurricane season and for that reason items 1 , 2 , and 3 should be applied.
